

Publishing content

Overview

Only once content is published is it available for visitors of your website to see.

Created content must be published to be accessible for visitors. You can create and edit content in draft form and only publish it when it is finished.

 - Difference between saving and publishing

Saving and Publishing Content

In order to finish editing a Content item you can do one of the following things:

- Save your changes - click the **Save** button in the menu.
- Publish the new Content - click the **Publish** button in the menu.
- Discard changes - click the **Discard changes** button in the menu or click the 'x' sign in the upper right corner of the form.

Difference between saving and publishing

The **Save** function allows you to save the current working copy into a draft to potentially reuse it later. The new version will not be published and will be invisible on the site or through the API.

The **Publish** function allows you to publish the final version of the content object. As a result the working copy turns into a published version that is visible on the site and available through the API as a published content.
