## Certified web servers

- [Apache](#)
- [Nginx](#)

## Others

- Lighttpd is known to work as well but is currently not supported. "Rewrite" rules for this web server can be found online, f.e. on the forums on [share.ez.no](http://share.ez.no).
- On Windows, it is recommended to use MS IIS 7 or higher (with Microsoft URL Rewrite Module 1.1 or higher). Apache 2.x for Windows is not supported since it only exists in "threaded" mode. See [Installing eZ Publish on Windows](#)
