

# EzPublishCoreBundle Configuration

- Default page

To get an overview of EzPublishCoreBundle's configuration, run the following command-line script:

```
php ezpublish/console config:dump-reference ezpublish
```

## Default page

### Version compatibility

This setting is available as of **5.3.2 / 2014.07**

Default page is the default page to show or redirect to.

If set, it will be used for default redirection after user login, overriding Symfony's `default_target_path`, giving the opportunity to configure it by SiteAccess.

```
ezpublish:  
    system:  
        ezdemo_site:  
            default_page: "/Getting-Started"  
  
        ezdemo_site_admin:  
            # For admin, redirect to dashboard after login.  
            default_page: "/content/dashboard"
```

This setting **does not change anything to Symfony behavior** regarding redirection after login. If set, it will only substitute the value set for `default_target_path`. It is therefore still possible to specify a custom target path using a dedicated form parameter.

**Order of precedence is not modified.**
