

Requirements for doing an automated installation

The requirements for an automated installation are the same as for the normal installation method. Please refer to the "[Requirements for doing a normal installation](#)" page for more information.

New requirements since version 4.5

In order to do an offline installation with the use of `kickstart.ini`, all required files must be downloaded from <http://packages.ez.no/ezpublish/> and extracted to `var/storage/packages/eZ-systems`

ezwebin:

`index.xml ezwebin_site.ezpkg ezwt_extension.ezpkg ezgmaplocation_extension.ezpkg ezstarrating_extension.ezpkg ezwebin_classes.ezpkg ezwebin_democontent.ezpkg ezwebin_design_blue.ezpkg ezwebin_design_cleangray.ezpkg ezwebin_design_gray.ezpkg ezwebin_extension.ezpkg ezwebin_banners.ezpkg`

ezflow:

`index.xml ezflow_site.ezpkg ezwt_extension.ezpkg ezgmaplocation_extension.ezpkg ezstarrating_extension.ezpkg ezwebin_extension.ezpkg ezflow_classes.ezpkg ezflow_democontent.ezpkg ezflow_design.ezpkg ezflow_extension.ezpkg`

The following extraction method is used for each `.ezpkg`:

1. Create a new directory with the same name, except for the `.ezpkg` suffix
2. Extract the `.ezpkg` file into it's directory with "`tar -xzf`"

Note that the `index.xml` file should be stored to `var/storage/packages/eZ-systems`

The next section explains how eZ Publish can be configured to do an automated installation of itself.
